

## Personal reflection, week 3

*Ivan Lyesnukhin*

-what do I want to learn or understand better?

In the relation of the last week, I became more familiar with using of html, css and I have now some basic understanding for Javascript programming language and React.

In the beginning of the week we broke down user stories to multiple tasks and distributed the last ones among the group members. Due to the holidays we made an exception for sprint period: instead of one week the duration of the sprint was 2 weeks (7 working days). So during this sprint every group member, including myself, was working with its own task.

I began first by reading some basics about Javascript and then React. After it I began work with my task which was the implementation of a calendar for a bike object. The process was going slowly, but it was going forward. After some attempts I finally reached the result. My plan for the rest of the course is to work more with React so I can be more and more familiar with it.

-how can I help someone else, or the entire team, to learn something new?

During this week I was getting more help than giving advice to someone. Due to the lack of knowledges in Javascript and Web-development, I needed explanation about how the things work. Communication and advice-giving was working very well. As plan for the next week is to have such level of knowledges so I can help others to implement their tasks.

-what is my contribution towards the team's use of Scrum?

From last week we could finally use Scrum technology of full value, because it was the first time we got a task to do during the sprint. My contribution was to create a calendar for a bike object. I think every group member has done everything it should been doing and everyone did it well.

-what is my contribution towards the team's deliveries?

Attending on the meetings, taking part in discussions and giving constructive proposals. As I mentioned before, we had a great cooperation between all group members and I we have discussed a lot of things like using of git, css, html, React, JavaScript. I was giving different types of proposal, some were accepted by the group, some were not. On the same time I was giving feedback to others and I think I made a contribution to the form of our project. I hope that by the time I will give more and more feedback and proposals to my group.
