

Personal reflection, week 7

Ivan Lyesnukhin

-what do I want to learn or understand better?

This week was the last one on the project and all goals that we set last week and in the beginning of the project have been achieved. In my opinion all group members have very high level of confidence in JavaScript and React, and can use it to develop different types of the web-applications. We all now have very good understanding of the software development, its process and using of Scrum technology.

-how can I help someone else, or the entire team, to learn something new?

By helping or advising what another person can do. Here it is no big change compared to the previous weeks. To perform my task I asked for a help another student in our group and he shared his knowledge with me, which helped me to complete my task.

-what is my contribution towards the team's use of Scrum?

This week we continued to use the strategy which implicates dividing big tasks on many small parts and doing more committing and pull-requests during the sprint. As it was expected, this strategy works successfully and results into easier merge-conflict resolvings.

-what is my contribution towards the team's deliveries?

This topic is unchanged from the previous sprint. Attending on the meetings, taking part in discussions and giving constructive proposals. The same as before, we divided our tasks between all group members and I was doing my part. This is my contribution. When we sum all the tasks together and we get the end result.
