

Personal Reflection

Carlos Yechouh

What do I want to learn or understand better?

During this sprint I have gained basic knowledge about JavaScript and React. In the coming sprint I would like to learn some best practices for JavaScript and also learn the React way of thinking. I would also like to learn how to set up a proper architecture for a single-page application. To accomplish this I will seek information on the web.

How can I help someone else, or the entire team, to learn something new?

I have taken part in discussions and shared knowledge in our physical meetings. I would like to be more available on Slack, because we usually stick to 1-2 physical meetings per sprint.

What is my contribution towards the team's use of Scrum?

I have been involved in formulating tasks for the coming sprint. I still don't feel that I've mastered the art of designing user stories and tasks. I know what I should look to achieve with a user story, but I am still uncertain in knowing whether I've included enough to make it a vertical slice. I also need to make sure it complies with the INVEST criteria, in particular, making sure it's independent. I also need to make sure the tasks that my team and I design complies with the SMART criteria. I will continue to try and develop my ability to design proper user stories and tasks.

I have continued to partake in the Sprint Review and Sprint Retrospective and provided feedback on some accomplished tasks.

What is my contribution towards the team's deliveries?

In this sprint, I completed my task and began trying to help solve part of two other tasks. My task was to develop a page that displays the available bikes in the database. The other problem I tried to understand and solve was the general way of routing around different pages in our app. I managed to implement part of the solution but will develop it further in the next sprint. I have also contributed in writing the team reflection.
