

Personal reflection, week 3

Ivan Lyesnukhin

-what do I want to learn or understand better?

In the relation of the last week, I have better understanding of our program structure and how it will be developed. I become more and more familiar with HTML and CSS and can now design different web pages using these tools.

During the last week, we were working on the basic understanding of development environment, we wanted to make sure that before we start coding everyone in the group is familiar and capable to use git, html and css. In my opinion we have succeeded.

We also wrote different user stories and our focus during this week was to make something visible for the client. So to make sure we can use html and css we wrote first meaning in the program "Hello world!" together in the group. After this basic step we decided that every group member will do a page with one search result (announcement about renting of a bike) by himself. It was the first user story for everyone.

My plans for the next week is to understand still further html and css, but also new language javascript.

-how can I help someone else, or the entire team, to learn something new?

This week was very productive in sharing the knowledges. On our meeting we were writing the first "Hello world!" page together. The point was to teach everyone to use git, html and css. All things that were unclear to someone were discussed in the group. I did my best to explain to the students the things they didn't understand. At the same time I have asked the questions when I did not understand something, the feedback and response was very good. I will continue on the same way, by explaining and asking dependent on having or lacking knowledges in some topic. In my opinion the sharing of the knowledges and cooperation between the students works excellent!

-what is my contribution towards the team's use of Scrum?

The Scrum can be used when we have some sprint. We have not started sprint yet, but one thing, which is on some way related to the Scrum, was done: we divided our group on two parts for writing user-story- one part was writing user story from rentee perspective, another one from the renter perspective. We had a great cooperation, we wrote down all user stories and on this way we created a good base for the future use of Scrum.

From the next week I want to have the real use of Scrum by taking task and doing it during the sprint.

This week we were working with user stories, some of them were rewritten in point to make them more vertical. During our meeting we were writing basic “Hello world!” page together, it was the first user story. Everyone, including me, was participating.

In the relation of the last week, I wanted to take some real user story for doing it during the sprint. On this week everyone had just one user story, which was common to all. The task was to make a page with one search result. I think I have done it well. During the next weeks I would like to have similar exercises.

-what is my contribution towards the team’s deliveries?

Attending on the meetings, taking part in discussions and giving constructive proposals. As I mentioned before, we had a great cooperation between all group members and I we have discussed a lot of things like using of git, css, html. I was giving different types of proposal, some were accepted by the group, some were not. On the same time I was giving feedback to others and I think I made a contribution to the form of our project. I hope that by the time I will give more and more feedback and proposals to my group.
