

Personal Reflection

What do I want to learn or understand better?

As the course progresses I would like to expand my knowledge of developing software engineering projects. Part of doing so is to use widely used tools which are common in the day to day life of developers in general such as git, slack, pencil and so on. I would like to gain experience in working in an agile work environment through the use of Scrum.

How can I help someone else, or the entire team, to learn something new?

I can contribute in discussions when somebody asks a question I think I might know the answer to or might know after a quick web search. If I see something I think might benefit the entire team or even just a single group member, I can make that information available to the team.

What is my contribution towards the team's use of Scrum?

As of this week I have yet to make any remarkable contributions in the use of Scrum, mainly because we have yet to set up roles. However, we did get a taste of Scrum during the lego exercise.

What is my contribution towards the team's deliveries?

I have attended the meeting where the writing of the social contract took place. My contributions include: making suggestions, editing the document, casting my vote, and keeping an open mind towards the groups ideas.
