What do I want to learn or understand better?

We managed to keep our tasks more separated this last sprint, but we had a problem of making them too big, and only using on branch in git per task, which essentially meant only one or two branches per person every sprint, that got merged in the end of the week. We want to make our tasks more granular and make it easier to hand in parts of a user story. To do that we decided on what Håkan suggested, which was to make our tasks smaller in effort, and to use branches for each, to make every task something that can be finished in one day, and a branch can live for only one day.

How can I help someone else, or the entire team, to learn something new?

In this sprint I helped my group members out on slack as much as I could, although I was very busy in the end of the week. I want to continue being present and helpful in the next sprint.

What is my contribution towards the team's use of Scrum?

Our whole group contributed to creating new user stories and breaking them down into smaller tasks than before. Me and Ivan pair programmed to implement a map view. In the future I want to have more refined user stories and tasks, and I will continue to help out as we make that for our future sprints.

What is my contribution towards the team's deliveries?

Me and Ivan worked on implementing a map view, and making it work with the list of items and the page for each bike. Towards the end of the week it got apparent to the people working on functionality to add bikes that the only way to store data would be to use some sort of a server, so I started looking into that more, and got a simple Express server running. In the next sprint I want to get the server to work with the react components we have, and show the group members working on saving users how to use the server.
