Personal Reflection
Carlos Yechouh

What do I want to learn or understand better?

During the course of this week I have gained some experience in using the main tools for developing web pages. These include basic knowledge in HTML and CSS. In the week(s) to come I would like to add Javascript and React.js to the list. To bridge the gap I will spend time watching tutorials and reading through articles, and also work on my assigned tasks using React.

How can I help someone else, or the entire team, to learn something new?

Now that we each have at least one task to attend to, I can share any knowledge that I gain, which I deem valuable, with the rest of the team.

What is my contribution towards the team's use of Scrum?

As of this week, I have been involved in producing user stories and tasks. I would like to become more proficient in producing these. I will do so by applying the hamburger method to split future user stories into more appropriate vertical slices.

I was present in this weeks Sprint Review and presented the task I had been working on during the previous sprint. I gained feedback and presented feedback on my peers work. I was also present during the Sprint Retrospective (which immediately followed the Sprint Review) where we discussed possible improvements for the sprint(s) to come. I will continue to attend the Sprint Review and Sprint Retrospective and make contributions towards better flowing sprints.

What is my contribution towards the team's deliveries?

This week, I developed a draft for an initial design of our bike page (the page displaying the chosen bike and its attributes, price, availability etc.) and the confirmation page (renting the bike will take you here). I have also contributed in writing the team reflection. I will continue contributing to the team reflections and strive towards finishing my task in time for the sprint review.
