Personal reflection, week 6

Ivan Lyesnukhin

-what do I want to learn or understand better?

In the relation of the last week I kept working with React and Javascript, but during this week I was doing more small tasks instead of a big one. I think it was much better, because I could make commits more often and get result as soon as possible. The project is going on the flow and all goals are achived. Right now my goal is to make everything done and I think I have enough tools for doing that.

-how can I help someone else, or the entire team, to learn something new?

By helping or advising what another person can do. Here it is no big change compared to the previous weeks. We help each other, we ask questions in Slack and we found answers. We are going to do so during the remaining weeks.

-what is my contribution towards the team's use of Scrum?

In the relation to the previous week we started a new strategy by more frequent merging into master. Instead of doing big tasks, we divide them on small tasks. Yes, everyone got more tasks to perform in the numerical measure, but on the other hand these tasks smaller and easier to perform. In my opinion this strategy is more efficient, since it delivers the value to the "client" more often and the "client" can see the result of our work. As plan for the next week is to continue to implement this strategy.

-what is my contribution towards the team's deliveries?

This topic is unchanged from the previous sprint. Attending on the meetings, taking part in discussions and giving constructive proposals. As I mentioned before, we had a great cooperation between all group members and I we have discussed a lot of things like using of git, css, html, React, JavaScript. I was giving different types of proposal, some were accepted by the group, some were not. On the same time I was giving feedback to others and I think I made a contribution to the form of our project. I do my part of the work, which is some task to perform and it results into some part of the end product. When everyone is doing its part we get the whole product. I will continue to do my tasks so we can create our application.
