What do I want to learn or understand better?

In this sprint I have learned more about the technologies we have used, and also how our tasks not being separated has affected our workflow, since we needed to sequence it in a somewhat precarious way. In the future I want to make sure our tasks are more separated, and I will make sure to bring that up when we write our tasks for the next sprint.

How can I help someone else, or the entire team, to learn something new?

In this sprint I helped Jesper, Henrik and Ivan out both in person, and online, to learn more about how React and JavaScript work, while also learning about those things myself. I am happy with the role of being a helping hand when I am needed, and in the future I want to keep being there, so that both the teammate I am helping and I can learn together.

What is my contribution towards the team's use of Scrum?

I have been using our semi-daily standup to communicate to my group about what I did. I think that worked well, and we have decided to continue doing that in our next sprint. I thought about getting a more proper server going for our backend, but Håkan told us that we should keep that low priority as it is not something that generates value for the customer. In the future I want to make sure I know what to prioritise, by always reminding myself of what value implementing something would give to the customer.

What is my contribution towards the team's deliveries?

We split up the work into different tasks in this sprint. I worked with Karin on the backend, consisting of a JSON document and a JavaScript file that reads and writes from it. I also met with Jesper and Henrik to help them on their task working on the front page, and I helped Ivan get the calendar to work correctly. In future sprints I want to be able to get more done by myself, but also be there to help my group mates. I will keep being active on slack and try to answer questions as soon as I can to be able to help my team finish their deliveries.
